THE MARKET UNDERNEATH THE PRICE

More context.
Before you commit.

Spread · Depth · Activity

In view

Concept illustration · not live market data

Public data. **Limited visibility.**

An on-chain order book can be transparent while the mobile trading experience still leaves the trader guessing.

01

A price hides the spread

One number does not show the gap between buyers and sellers.

02

Liquidity needs context

A thin or one-sided book can change what a trade executes against.

03

Activity needs interpretation

Raw quotes and fills are hard to assess before tapping “buy.”

The missing step: understanding the market before committing funds.

Turn market data into **usable context**.

Searix brings the shape and quality of the order book into the trading decision.

DISCOVER

Find more than a price

Browse markets with spread, depth and a plain-language quality signal alongside price and change.

UNDERSTAND

See the shape of the book

Price history and cumulative depth charts reveal the liquidity behind the headline number.

WEIGH THE SIGNAL

Know what deserves a look

Short explanations flag thin or one-sided books and activity worth examining.

A quality signal is context to weigh — never financial advice or proof of unfairness.

From discovery to a deliberate trade.

A clear path from market context to wallet approval.

01 / DISCOVER

Choose a market

Search active markets and compare execution-quality signals.

02 / ANALYZE

Inspect the book

Review price, depth and quality stats in the pre-trade execution lab.

03 / PREVIEW

Review the trade

See the proposed execution before deciding to commit funds.

04 / APPROVE

Sign in your wallet

Approve and submit through your connected Solana wallet.

AFTER THE TRADE

Saved execution receipts distinguish verified executions from analysis-only records.

STAY INFORMED

Peg-deterioration alerts surface backend signals for supported assets.

Built for mobile. Grounded in honesty.

YOUR WALLET, YOUR KEYS

Approval stays with you

Signing happens inside your wallet app.
Searix never asks for, sees or stores your private key.

TRANSPARENT ECONOMICS

Fees in plain sight

Profile shows platform fee, collection and revenue information — including when fees are not yet collected.

HONEST PRODUCT STATES

Clear about what's ready

Empty, error and preview states are labeled.
The watchlist is openly marked as not built yet.

MOBILE

Expo + React Native

TypeScript · Expo Router · SVG charts

WALLET

Solana Mobile Wallet Adapter

Android wallet flow · SecureStore session

MARKET DATA

REST + live WebSocket

Backend API · real-time market updates

See what you're about to trade into — before you commit.
